PROFILE

I am a detail-oriented Backend Developer with extensive experience in Python, Django, Flask, SQL, and REST API development. As a team leader in marine projects, I actively troubleshoot and solve problems in a multilingual environment, collaborating daily in English.

My background has equipped me with strong analytical skills and a scientific approach to challenges. I am also experienced in frontend development with JavaScript, React Redux, HTML, and CSS, and I work comfortably with GNU/Linux and FreeBSD systems.

I leverage AI tools for coding, debugging, and optimization, enhancing efficiency and solution quality. Currently, I am developing a cryptocurrency trading bot, deepening my expertise in data analysis with Pandas and NumPy, and exploring machine learning with Keras.

EDUCATION

Kodilla

Bootcamp Python Flask and Django | 01-05.2024

During an intensive course, I acquired the skills to proficiently develop the backend aspects of applications using the Python language and the Flask framework.

Bootcamp Front-end React | 05-10.2023

Intensive course during which I learned to efficiently create applications using both React framework and pure JavaScript Moreover, I have mastered my skills in CSS and HTML.

Adam Mickiewicz University

Master of Biology 2004-2010
